Summary

Computer Science student at Tecnológico de Costa Rica with a strong focus on blockchain, Web3, and open-source development. Active contributor in the Stellar ecosystem, building decentralized solutions for transparency and accessibility. Skilled communicator and collaborator, with experience in competitive programming and hackathons.

Education & Certifications

Bachelor's in Computer Science - Tecnológico de Costa Rica (2025 - Present)

- Courses: Linear Algebra, Discrete Math, Programming in Python, Fundamentals of Computer Organization
- Participation in Blockchain and AI hackathons/meetups (Stellar, MIT Sloan Club)

High School Degree - Colegio Científico Costarricense Sede Cartago (2023 - 2024) - Grade: 90+

- National Competitive Programming Olympics – Honorable Mention

GitHub Foundations - Expiration: June 2028

English Certification Test ECT-UCR - Listening/Reading: C1 - Speaking/Writing: B2]

Work Experience

GrantFox - QA Engineer - Jan 2026 - Present

- Parted QA across the full platform, owning test strategy, coverage, and release confidence end-to-end.
- Tested and validated a fully fleshed-out website that distributed \$12,000 across 10+ countries in 2 weeks during its first beta campaign.
- Expanding into full-stack contributions, bridging QA insights directly into frontend and backend improvements.

Oppia Labs - Co-Founder & Full-Stack Engineer - Nov 2025 - Present

- Co-founded the studio and contributed to full-stack systems across multiple Web3 projects including Neko and Geko.
- Contributed to Stellar-based DeFi products, working across Next.js frontends, backend integrations and smart contract integrations in Soroban/ink!.
- Won multiple international hackathons with the Oppia team on Stellar.

Projects

Neko Protocol (main Oppia project) - all-in-one platform for RWAs on Stellar

- Created a protocol for lending/borrowing and a liquidity layer for RWAs.
- Co-founded and developed a fully working frontpage for RWAs on Stellar
- Built for the Stellar Hack+ 2025 in Argentina, we got 3rd place and won Innovation bounty.

Althara Pacta - Decentralized Governance Platform

- Built on Ethereum & Filecoin, enables transparent government tenders and bid management.
- This project won second place in the Aleph Hackathon 2025 (Filecoin Track).

Veridion - Decentralized Identity Platform

- Built on Stellar and NestJS, users verify humanness for different dApps who use our infrastructures.
- Built for Stellar's HackMeridian 2025, celebrated in Rio de Janeiro, Brazil. 13th place.

Kleo Protocol - DeFi protocol to solve undercollateralized loans

- Built on Polkadot + ink!, we made a protocol for lending/borrowing without using collateral, but based around trust and mathematics.
- Built for Sub0 Symbiosis Argentina 2025, winner of Polkadot Main Track.

More open-source work on GitHub.

Tech Stack

Frontend: *Javascript, TypeScript, Tailwind CSS, React, Next.js*

Backend: *Python, FastAPI, Node.js, Express, Stellar SDK, NestJS*

Tools: *Git, Github, Vercel, Supabase*

Databases: *Supabase, PostgreSQL, Prisma*
